

SHALAMAR HOSPITAL LABORATORY

M.R. No. 0092533/2089
Lab. No. 009164/2021

Patient Name: Maham Qammar Voucher No. 041895/0217
Age: 23 Years Admission No. --NIL-- Date of Service: 10/09/2020 12:37:12PM
Gender: FEMALE Patient Type: Private / Normal Date Specimen Received: 10/09/2020 12:44:06PM
Location: Private-1 Ref. by Doctor: --NIL-- Date Reported: 12/09/2020 01:54:44PM

MOLECULAR BIOLOGY REPORT

COVID-19 (Corona) Virus

Qualitative Polymerase Chain Reaction (PCR)

Specimen Swab

Result Not Detected

One or more negative results do not rule out the possibility of COVID-19 virus infection. A number of factors could lead to a negative result in an infected individual, including:

- poor quality of the specimen, containing little patient material
- the specimen was collected late or very early in the infection
- technical reasons inherent in the test, e.g. virus mutation or PCR inhibition.

If a negative result is obtained from a patient with a high index of suspicion for COVID-19 virus infection, particularly when only upper respiratory tract specimens were collected, additional specimens, including from the lower respiratory tract if possible, should be collected and tested.

Test performed using TaqMan 2019 nCoV Assay Kit v2 by Thermo Fisher Scientific

Laboratory testing for coronavirus disease 2019 (COVID-19) in suspected human cases.WHO Interim guidance 2nd March 2020

Report Electronically Signed By: ZEESHAN.FAISAL
Medical Lab Technologist

☒ Outsourced test

*** End Of Report ***

Note: Shalamar Hospital Laboratory has outsourced Covid-19 (Corona Virus) test by PCR Qualitative to Chughtai Lab. Chughtai Lab is obligated by law to share data on covid tests with Health Authorities .
